

## Language Map for C#

<p><b>Variable Declaration</b>  <i>Is this language strongly typed or dynamically typed?  Provide at least three examples (with different data types or keywords) of how variables are declared in this language.</i></p>	<p>C# Is a strongly typed programming language.</p> <p>Variables:  const int num = 5; (I don't want the variable to change for the life of the program)  string fName = "Lawrence";  bool myBoolean = true;  char myLetter = 'A';</p>
<p><b>Data Types</b>  <i>List all of the data types (and ranges) supported by this language.</i></p>	<p><b>Integral Types</b>  sbyte = -128 to 128  byte = 0 to 255  short = -32,768 to 32,767  ushort = 0 to 65,535  int = -2,147,483,648 to 2,147,483,647  uint = 0 to 4,29,967,295  long = -9,223,372,036,854,775,808 to 9,223,372,036,854,775,807  ulong = 0 to 18,446,744,073,709,551,615</p> <p><b>Float</b>  float = <math>\pm 1.5 \times 10^{-45}</math> to <math>\pm 3.4 \times 10^{38}</math>  double = <math>\pm 5.0 \times 10^{-324}</math> to <math>\pm 1.7 \times 10^{308}</math>  decimal</p> <p><b>Character and String</b>  char = represents a single 16-bit Unicode character.  String = represents a sequence of characters.</p> <p><b>Boolean</b>  bool = Represents a Boolean value with true or false</p> <p><b>Enum</b>  enum = represents a set of named integer constants</p> <p><b>Structures</b>  User-defined value types created with the struct keyword</p> <p><b>Reference Types</b>  object = The base type for all other data types.  dynamic = A type that avoids compile-time type checking and resolves types at runtime.  classes = user-defined reference types.</p> <p><b>Nullable&lt;T&gt; or T?</b>  Allows value types to have a null value.</p> <p><b>Arrays</b>  Represents a collection of elements of the same data type.</p>

## Selection Structures

*Provide examples of all selection structures supported by this language (if, if else, etc.) **Don't just list them, show code samples of how each would look in a real program.***

### **if-statement**

```
int number = 20
```

```
if (number < 50)
{
    return true;
}
```

### **if-else statement**

```
if (number < 50)
{
    return true;
}
else
{
    return false;
}
```

### **if-else-if statement**

```
if (number < 30)
{
    return true;
}
else if (number == 20)
{
    return true;
}
else
{
    return false;
}
```

### **switch statement**

```
int day = 4
switch (day)
{
    case 1:
        Console.WriteLine("Monday");
        break;
    case 2:
```

	<pre>         Console.WriteLine("Tuesday");         break;     case 3:         Console.WriteLine("Wednesday");         break;     case 4:         Console.WriteLine("Thursday");         break;     } </pre>
<p><b>Repetition Structures</b>  <i>Provide examples of all repetition structures supported by this language (loops, etc.) <b>Don't just list them, show code samples of how each would look in a real program.</b></i></p>	<p><b>for statement</b>  <pre> for (int i = 0; i &lt; 3; i++) {     Console.WriteLine(i); } </pre> </p> <p><b>foreach statement</b>  <pre> var fibNumbers = new List&lt;int&gt; {0, 1, 1, 2, 3, 5, 8, 13}; foreach (int element in fibNumbers) {     Console.WriteLine(\$"{element}"); } </pre> </p> <p><b>do statement</b>  <pre> int num = 0; do {     Console.WriteLine(num);     num++; } while (num &lt; 5); </pre> </p> <p><b>while statement</b>  <pre> while (num &lt; 5) {     Console.WriteLine(num);     num++; } </pre> </p>
<p><b>Arrays</b>  <i>If this language supports arrays, provide <b>at least two examples</b> of creating an array with a primitive or String data types (e.g. float, int, String, etc.) If the</i></p>	<pre> int[ ] numbers = {1, 2, 3, 4, 5};  string[ ] cars = {"Toyota", "Volvo", "Honda"}; </pre>

<p><i>language supports declaring arrays in multiple ways, provide an example of way.</i></p>	<pre>int[ ] numbers;  int[ ] numbers = new int[5]</pre>
<p><b>Data Structures</b>  <i>If this language provides a standard set of data structures, provide a list of the data structures and their Big-Oh complexity (identify what the complexity represents).</i></p>	<p><b>Array:</b>  Access: <math>O(1)</math> constant  Search: <math>O(n)</math> <math>n</math> depends on the size of the input  Insertion: <math>O(n)</math> <math>n</math> depends on the size of the input  Deletion: <math>O(n)</math> <math>n</math> depends on the size of the input</p> <p><b>List:</b>  Access: <math>O(1)</math> constant  Search: <math>O(n)</math> <math>n</math> depends on the size of the input  Insertion: <math>O(n)</math> <math>n</math> depends on the size of the input  Deletion: <math>O(n)</math> <math>n</math> depends on the size of the input</p> <p><b>Dictionary&lt;TKey, TValue&gt;(HashMap):</b>  Access: <math>O(1)</math> average, <math>O(n)</math> worst case – constant time, <math>n</math> depends on the input size  Search: <math>O(1)</math> average, <math>O(n)</math> worst case – constant time, <math>n</math> depends on the input size  Insertion: <math>O(1)</math> average, <math>O(n)</math> worst case – constant time, <math>n</math> depends on the input size  Deletion: <math>O(1)</math> average, <math>O(n)</math> worst case – constant time, <math>n</math> depends on the input size</p> <p><b>HashSet:</b>  Access: <math>O(1)</math> average, <math>O(n)</math> worst case – constant time, <math>n</math> depends on the input size  Search: <math>O(1)</math> average, <math>O(n)</math> worst case – constant time, <math>n</math> depends on the input size  Insertion: <math>O(1)</math> average, <math>O(n)</math> worst case – constant time, <math>n</math> depends on the input size  Deletion: <math>O(1)</math> average, <math>O(n)</math> worst case – constant time, <math>n</math> depends on the input size</p> <p><b>Queue:</b>  Enqueue: <math>O(1)</math> constant time  Deque: <math>O(1)</math> constant time</p> <p><b>Stack:</b>  Push: <math>O(1)</math> constant time  Pop: <math>O(1)</math> constant time</p> <p><b>LinkedList:</b>  Access: <math>O(n)</math> <math>n</math> depends on the size of the input  Search: <math>O(n)</math> <math>n</math> depends on the size of the input  Insertion: <math>O(1)</math> constant time  Deletion: <math>O(1)</math> constant time</p>

	<b>SortedSet:</b> Access: $O(\log n)$ logarithmic time Search: $O(\log n)$ logarithmic time Insertion: $O(\log n)$ logarithmic time Deletion: $O(\log n)$ logarithmic time
<b>Objects</b> <i>If this language support object-orientation, provide an example of how you would write a simple object with a default constructor and then how you would instantiate it.</i>	<pre> public MyCar {     private int numWheels;     private string carMake;      public myCar()     {         numWheels = 4;         carMake = "";     } }  public Application {     static void Main(string[] args)     {         MyCar toyota = new MyCar();     } } </pre>
<b>Runtime Environment</b> <i>What runtime environment does this language compile to? For example, Java compiles to the Java Virtual Machine.</i> <i>Do other languages also compile to this runtime? If so, what these other languages?</i>	C# uses Common Language Runtime  Other languages that use CLR: VB.NET F# C++ J#
<b>Libraries/Frameworks</b> <i>What are the popular libraries or frameworks used by programmers for this language? List at least three (3) and describe what they are used for.</i>	ASP.NET – a widely used web framework for building dynamic web applications, including websites and web services. Entity Framework – An Object-Relational Mapping framework that simplifies database interactions in C# applications.

	Xamarin – A framework for building cross-platform mobile applications.
<b>Domains</b> <i>What industries or domains use this programming language? Provide at least three specific examples of companies that use this language and what they use it for. <b>E.g. Company X uses C# for its line of business applications.</b></i>	<p>Microsoft – Microsoft, the creator of C# uses it extensively for developing various software products and platforms, including Windows applications, cloud services (Azure), and game development with the Unity game engine.</p> <p>Ubisoft – Employs C# for game development. They have used C# in games like Assassin's Creed and Watch Dogs.</p> <p>Nasdaq – A stock exchange, use C# for developing trading platforms, order management system, and financial software.</p>
